

Event Information:

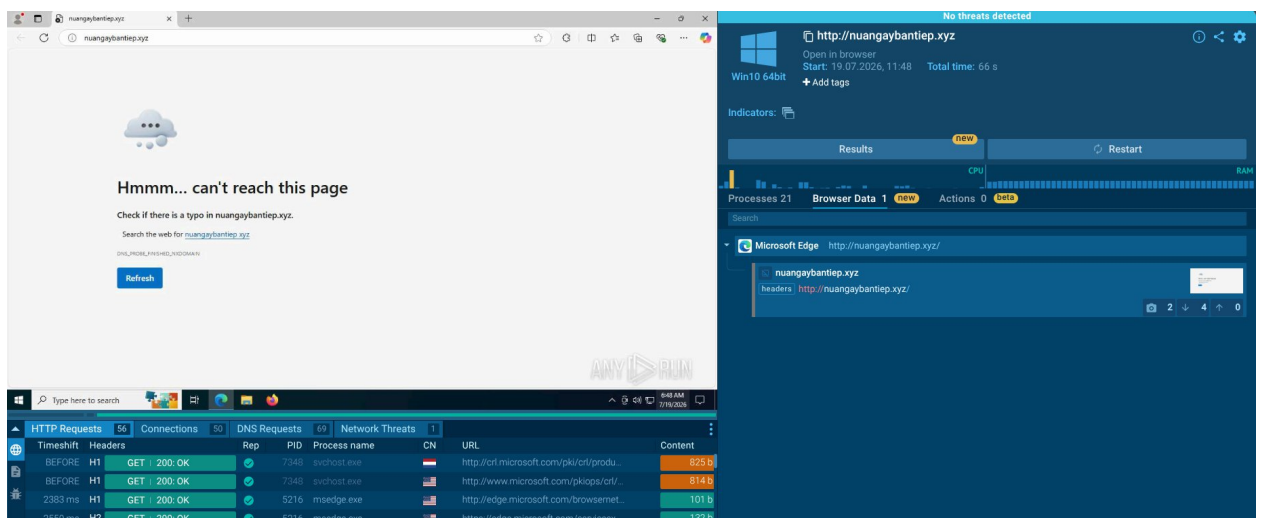

EventID :
87
Event Time :
Apr, 04, 2021, 11:00 PM
Rule :
SOC101 - Phishing Mail Detected
Level :
Security Analyst
SMTP Address :
146.56.195.192
Source Address :
lethuyan852@gmail.com
Destination Address :
mark@letsdefend.io
E-mail Subject :
Its a Must have for your Phone
Device Action :
Allowed

Analysis Steps:

Logs were searched for the email which triggered the alert which includes the link `hxxp://nuangaybantiep[.]xyz`.

On attempting to analyse the link the domain appears to be down.

When searching the logs we can see that the user did interact with the URL.

Raw Log contains "nuangaybantiep"

1 row selected

At the time of the attack the IP associated with the domain was an official Namecheap address and so the Attacker was making use of official Infrastructure.

Not much information is available but it can be confirmed that MarkPRD 172[.]16.17.88 interacted with this malicious link and therefore this must be considered to be a successful True Positive.

The offending SMTP IP is not in our CTI database and is external to the organisation. No emails have been received indicating penetration testing involving the IP for the relevant time period. VirusTotal indicates it is a Chinese address associated with 146[.]56.195.192 AS 45090 (Shenzhen Tencent Computer Systems Company Limited). 0/91 security vendors flagged this IP address as malicious as of 1 month ago.

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a successful True Positive.

Report:

Incident Summary Analysis confirms a successful True Positive phishing incident. An external threat actor delivered an email containing a malicious link to an internal user. Proxy logs confirm the user interacted with the payload and successfully connected to the attacker's infrastructure.

Incident Details

- **Alert Name:** SOC101 - Phishing Mail Detected
- **Target Account:** mark[.]letsdefend[.]io
- **Sender Address:** lethuyan852[.]gmail[.]com
- **Sender IP:** 146[.]56.195.192
- **Email Subject:** Its a Must have for your Phone
- **Device Action:** Allowed

Analysis and Evidence

- **Payload Delivery:** The email body contained a brief social engineering lure instructing the user to check out a product, followed by the malicious URL: `hxxp://nuangaybantiep[.]xyz`.
- **Execution Verification:** Proxy logs show a successful GET request to the URL originating from the internal host MarkPRD (172[.]16.17.88) at 11:10 PM on Apr, 04, 2021.
- **Connection Confirmation:** The proxy event confirms the user's machine successfully resolved and reached out to the attacker's destination IP (192[.]64.119.190) over port 80.
- **Current Status:** Subsequent attempts to analyse the domain in a sandbox reveal the page is currently down and unreachable.

Threat Intelligence

- **Infrastructure OSINT:** At the time of the attack, the IP associated with the malicious domain was an official Namecheap address. This indicates the threat actor was successfully leveraging legitimate hosting infrastructure to conduct the campaign.

Actions Taken

1. Analysed email logs to identify the sender, the lure, and the exact URL used in the attack.
2. Searched proxy logs for the extracted URL, confirming the user clicked the link and communicated with the destination infrastructure.
3. Verified the current status of the malicious domain, noting it is now offline.
4. Purged the phishing email from mark[.]letsdefend[.]io's inbox to prevent further interaction.
5. Isolated the host from the network.
6. Declared the alert a successful True Positive and escalated.
