

Event Information:

EventID :

86

Event Time :

Mar, 22, 2021, 09:23 PM

Rule :

SOC141 - Phishing URL Detected

Level :

Security Analyst

Source Address :

172.16.17.49

Source Hostname :

EmilyComp

Destination Address :

91.189.114.8

Destination Hostname :

mogagrocol.ru

Username :

ellie

Request URL :

http://mogagrocol.ru/wp-content/plugins/akismet/fv/index.php?email=ellie@letsdefend.io

User Agent :

Mozilla/5.0 (Windows NT 6.1; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)

Chrome/79.0.3945.88 Safari/537.36

Device Action :

Allowed

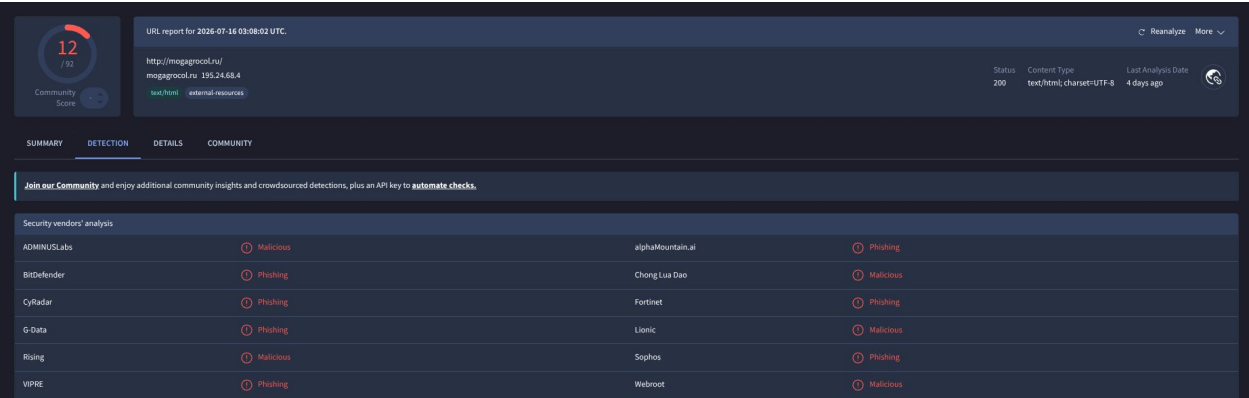

Analysis Steps:

Logs were searched with IP 172[.]16.17.49 as the source in the relevant time-frame yielding 2 events. We can see the user interacting with a suspicious URL.

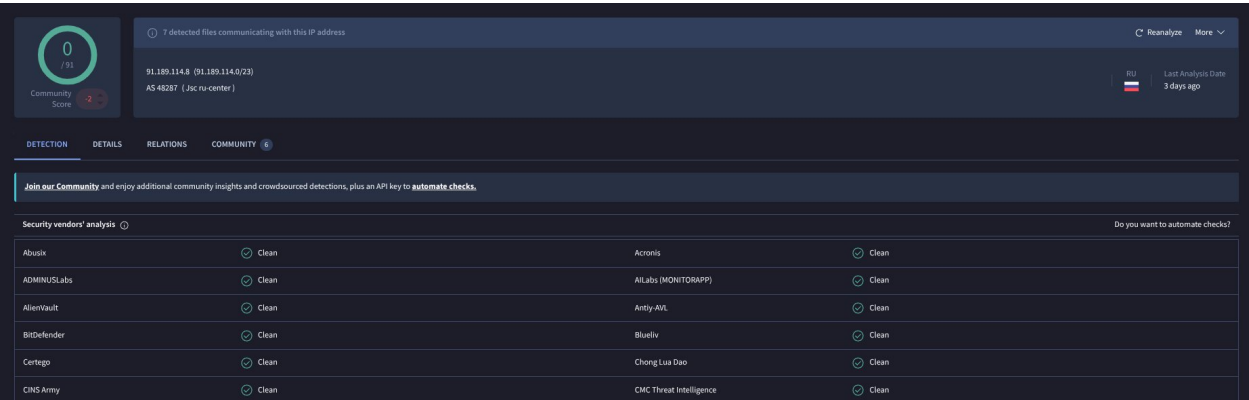

The screenshot shows a security log viewer interface. At the top, a search bar contains the text "Source Address contains '172.16.17.49'" and a date filter "2021-03-21". Below the search bar, it indicates "2 events (before Mar, 22, 2021, 09:23 PM UTC)". The main area displays a table of event details for a specific event.

Field	Value
type	Proxy
source_address	172.16.17.49
source_port	55662
destination_address	91.189.114.8
destination_port	80
time	Mar, 22, 2021, 09:23 PM

Request URL	http://mogagrocol.ru/wp-content/plugins/akismet/fv/index.php?email=ellie@letsdefend.io

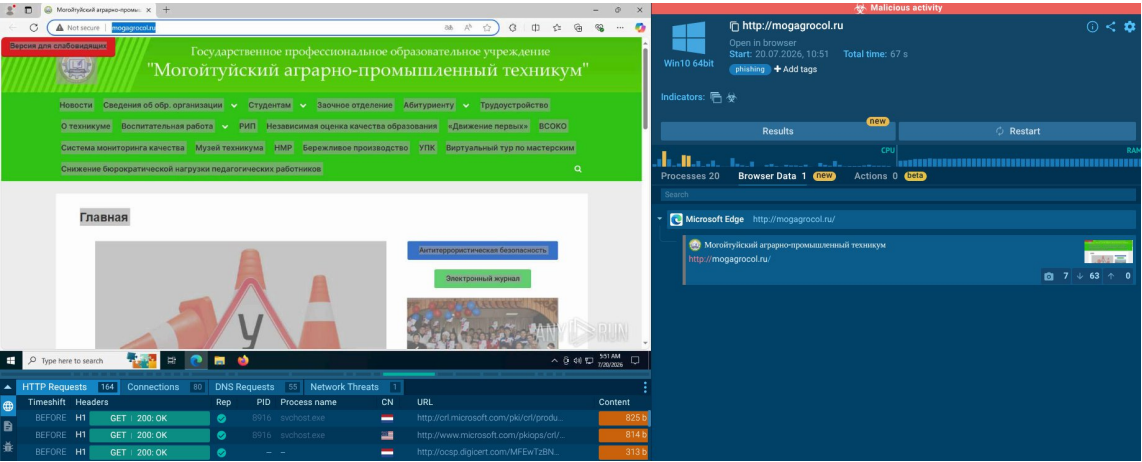

When searching VirusTotal 12/92 Vendors list the domain as malicious and generally associate it with malware as of 4 days ago.

The IP address associated with the domain at the time of the incident is not in our CTI database and is external to the organisation. No emails have been received indicating penetration testing involving the IP for the relevant time period. VirusTotal indicates it is a Russian address associated with 91[.]189.114.8 AS 48287 (Jsc ru-center). 0/91 security vendors flagged this IP address as malicious as of 3 days ago.

The domain is still up but not being a speaker of Russian it is hard to determine the website's purpose. AnyRun lists Malicious activity due to "known threat".

Overall this activity seems suspicious. Based on following Playbook procedure and the analysis of available information, this alert is determined to be a successful True Positive.

Report:

Incident Summary

Analysis confirms a successful True Positive phishing URL interaction originating from an internal endpoint. The user navigated to a Russian website hosting what is likely a malicious credential harvesting directory. Proxy and firewall logs confirm the outbound connection was permitted, meaning the user successfully loaded the malicious infrastructure.

Incident Details

- **Alert Name:** SOC141 - Phishing URL Detected
- **Target Host:** EmilyComp (172[.]16.17.49)
- **Affected User:** ellie[@]letsdefend[.]io
- **Malicious Domain:** mogagrocol[.]ru
- **Destination IP:** 91[.]189.114.8
- **Device Action:** Allowed

Analysis and Evidence

- **User Interaction:** Proxy telemetry confirms that at 09:23 PM on Mar, 22, 2021, the host EmilyComp initiated a direct outbound connection to the external destination over port 80.
- **Targeted Phishing URL:** The exact web request was directed to `hxxp://mogagrocol[.]ru/wp-content/plugins/akismet/fv/index.php?email=ellie[@]letsdefend[.]io`.
- **Attack Delivery:** The presence of the `?email=` parameter appended to the index file strongly indicates a targeted spear-phishing link. This technique pre-fills the victim's email address on a fraudulent login portal to lower suspicion and track successful clicks.
- **Compromise Vector:** Because the firewall action recorded this as "Allowed", the webpage successfully rendered on the user's browser, creating a high risk of credential exposure.

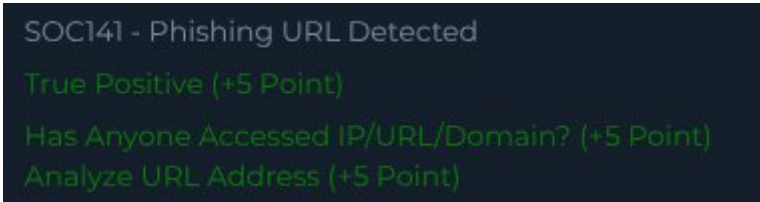

Threat Intelligence

- **Domain Reputation:** VirusTotal shows that 12/92 security vendors explicitly flag mogagrocol[.]ru as a malicious phishing and malware domain. AnyRun sandbox infrastructure confirms active phishing classification on the site.
- **Infrastructure Status:** On further investigation the domain seems to resolve to a legitimate, compromised Russian agrarian-industrial technical college website hosted by Jsc ru-center (91[.]189.114.8) in Russia. Attackers frequently compromise vulnerable WordPress sites to secretly host their phishing kits.

Actions Taken

1. Analysed network proxy logs, confirming a successful outbound connection to the malicious tracking URL.
2. Verified the domain status via OSINT tools, indicating it is likely a compromised website hosting a phishing directory.
3. Isolated the device from the network.
4. Declared the alert a successful True Positive and escalated.

Let's Defend Result

```
SOC141 - Phishing URL Detected
True Positive (+5 Point)
Has Anyone Accessed IP/URL/Domain? (+5 Point)
Analyze URL Address (+5 Point)
