

Event Information:

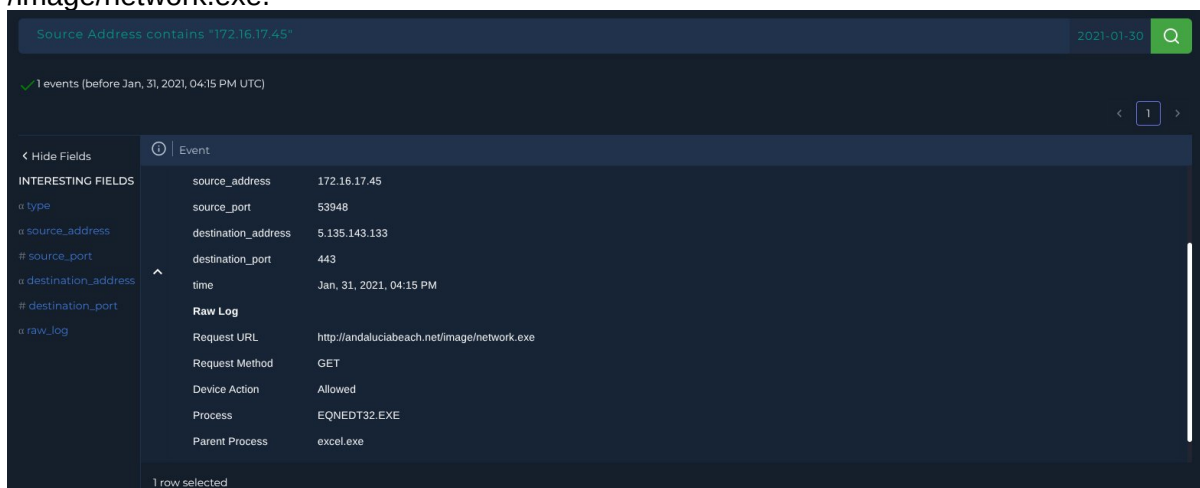

EventID :
48
Event Time :
Jan, 31, 2021, 04:20 PM
Rule :
SOC107 - Privilege Escalation Detected
Level :
Security Analyst
Source Address :
172.16.17.45
Source Hostname :
RichardPRD
File Name :
JuicyPotato.exe
File Hash :
808502752ca0492aca995e9b620d507b
File Size :
340 KB
Device Action :
Allowed

Analysis Steps:

Through Email analysis we are able to identify how the malicious file was delivered to the endpoint.

Logs were searched with attacker IP 172.16.17.45 (RichardPRD) as the source in the relevant time-frame yielding 1 event. We can see that Excel's EQNEDT32 is reaching out to a <http://andaluciabeach.jnet> (5.135.143.133) for what seems to be a second payload of /image/network.exe.

The original file is listed as malicious by 54/68 Vendors on VirusTotal of the type Trojan/Hack Tool as of 7 days ago.

The offending IP found in the logs is not in our CTI database and is external to the organisation. No emails have been received indicating penetration testing involving the IP for the relevant time period. VirusTotal indicates it is a French address associated with 5[.]135.143.133 AS 16276 (OVH SAS). 0/91 security vendors flagged this IP address as malicious as of 7 days ago.

REPORT 70.38.21.234

WHOIS 70.38.21.234

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a successful True Positive.

Report:

Incident Summary

Analysis confirms a successful True Positive privilege escalation attack on the host RichardPRD (172[.]16.17.45). The attack vector was a phishing email containing a password-protected attachment. Upon interaction, the attachment exploited Excel's Equation Editor (EQNEDT32.EXE) to download a secondary payload from an external C2 domain. The alert was subsequently triggered by the execution of JuicyPotato.exe, a known privilege escalation tool.

Incident Details

- **Alert Name:** SOC107 - Privilege Escalation Detected
- **Target Host:** RichardPRD (172[.]16.17.45)
- **Flagged File:** JuicyPotato.exe
- **File Hash:** 808502752ca0492aca995e9b620d507b
- **Device Action:** Allowed

Analysis and Evidence

- **Initial Access:** Email logs confirm the delivery of a malicious invoice email originating from accounting[.]cmail[.]carleton[.]ca.
- **Execution & C2:** Endpoint logs indicate excel.exe spawned EQNEDT32.EXE. This process successfully initiated an outbound HTTP GET request to hxxp://andaluciabeach[.]net/image/network.exe to fetch a secondary executable. At the time of execution, this domain resolved to 5[.]135.143.133.
- **Privilege Escalation:** The file JuicyPotato.exe was dropped and executed on the system to elevate privileges.

Threat Intelligence

- **OSINT (Payload):** VirusTotal analysis definitively identifies the JuicyPotato.exe hash as a malicious HackTool, flagged by 54/68 vendors.
- **OSINT (Infrastructure):** VirusTotal indicates the C2 domain andaluciabeach[.]net is flagged as malicious by 4/92 vendors. While the historical connection was to a French OVH IP (5[.]135.143.133), current OSINT queries show the domain resolving to a Canadian IP (70[.]38.21.234) with a 0% abuse confidence rating on AbuseIPDB, highlighting dynamic infrastructure rotation.
- **Internal Correlation:** No authorised penetration testing is scheduled for this host or time-frame.

Actions Taken

1. Verified the malicious nature of the JuicyPotato binary via OSINT.
2. Traced the execution chain back to a malicious email attachment and subsequent outbound C2 domain connection.
3. Contained host RichardPRD (172[.]16.17.45) to prevent lateral movement.
4. Declared the alert a True Positive and escalated.
