47
Event Time :
Jan, 31, 2021, 06:14 PM
Rule :
SOC115 - Wscript.exe Usage as Dropper
Level :
Security Analyst
Source Address :
172.16.17.33
Source Hostname :
DanielPRD
File Name :
injector.vbs
File Hash :
1773cf37129003d9788c79b1a7bc155e
File Size :
211.84 Kb
Device Action :
Allowed

Analysis Steps:

Logs were searched with IP 172[.]16.17.33 (DanielPRD) as the source in the relevant time-frame yielding 2 events. These results indicate C2 activity to 105[.]103.253.204 on port 2017. Network and email logs do not indicate the delivery method.

[Jan, 31, 2021, 06:13 PM] source_address=172.16.17.33 source_port=32112 destination_address=105.103.253.204 destination_port=2017 raw_log: {}

Searching the file hash on VirusTotal indicating this is a Trojan. 17/62 Vendors list this file as malicious as of 2 months ago.

The screenshot shows the VirusTotal interface for the file `injector.vbs` (hash: `d66b3594c966507604d10407345d56567923b49a27c450a349512890157`). It indicates that 17 out of 62 security vendors flagged this file as malicious. The file is 211.94 KB and was last analyzed 2 months ago. The 'DETECTION' tab is active, showing a 'Popular threat label' of `trojan.obf4ddr` and 'Threat categories' of `trojan`. A table lists security vendors' analysis results:

Vendor	Detection	Threat Category	Family Labels
AlCloud	Trojan.WSOffice.Wacatac.B9nj	ALYac	GT-VB.OBF4ddr.15.479270A7
Arcabit	GT-VB.OBF4ddr.15.479270A7	BitDefender	GT-VB.OBF4ddr.15.479270A7
CTX	Javascript.trojan.obf4ddr	Emsisoft	GT-VB.OBF4ddr.15.479270A7 (B)

A report can be found on AnyRun indicating no malicious activity but the screenshots suggest that the file failed to run during this testing.

The screenshot shows the AnyRun interface for the file `injector.vbs`. It indicates 'No threats detected'. The file is 211.94 KB and was last analyzed 2 months ago. The 'DETECTION' tab is active, showing a 'Popular threat label' of `trojan.obf4ddr` and 'Threat categories' of `trojan`. A table lists security vendors' analysis results:

Vendor	Detection	Threat Category	Family Labels
AlCloud	Trojan.WSOffice.Wacatac.B9nj	ALYac	GT-VB.OBF4ddr.15.479270A7
Arcabit	GT-VB.OBF4ddr.15.479270A7	BitDefender	GT-VB.OBF4ddr.15.479270A7
CTX	Javascript.trojan.obf4ddr	Emsisoft	GT-VB.OBF4ddr.15.479270A7 (B)

On static analysis of `injector.vbs` we can see it is heavily obfuscated and that at the very top of what is readable it utilises `wscript.sleep(30000)` which is likely for sandbox evasion.

Fileless command and control is executed using `AA.send` to request an external payload and `Execute(AA.responsetext)` to run the server's response directly in system memory.

Persistence is established using heavily obfuscated strings to call `WshShell.SpecialFolders` targeting the Windows Startup directory, `CreateShortcut` to generate a `.lnk` file, and `oShellLink.Save()` to ensure the malware executes upon reboot.

The offending IP is not in our CTI database and is external to the organisation. No emails have been received indicating penetration testing involving the IP for the relevant time period. VirusTotal indicates it is an Algerian address associated with 105.103.253.204 AS 36947 (Telecom Algeria). 0/91 security vendors flagged this IP address as malicious.

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a successful True Positive.

Report:

Incident Summary

Analysis confirms a successful True Positive alert for wscript.exe usage as a dropper on the host DanielPRD (172[.]16.17.33). The malicious script, injector.vbs, employs sandbox evasion techniques and successfully reached out to an external Command and Control (C2) server. The script establishes persistence via the Windows Startup directory and executes secondary payloads directly in memory to evade detection.

Incident Details

- **Alert Name:** SOC115 - Wscript.exe Usage as Dropper
- **Target Host:** DanielPRD (172[.]16.17.33)
- **Flagged File:** injector.vbs
- **File Hash:** 1773cf37129003d9788c79b1a7bc155e
- **Device Action:** Allowed

Analysis and Evidence

- **Network Activity:** Firewall logs confirm 2 events indicating successful C2 communication from the host to 105[.]103.253.204 over port 2017. Network and email logs currently do not indicate the initial delivery method.
- **Sandbox Evasion:** Static analysis reveals heavy obfuscation and the use of `wscript.sleep(30000)` to stall execution.
- **Execution & C2:** Fileless command and control is executed using `AA.send` to request an external payload and `Execute(AA.responsetext)` to run the server's response directly in system memory.
- **Persistence:** Persistence is established using heavily obfuscated strings to call `WshShell.SpecialFolders` targeting the Windows Startup directory, `CreateShortcut` to generate a `.lnk` file, and `oShellLink.Save()` to ensure the malware executes upon reboot.

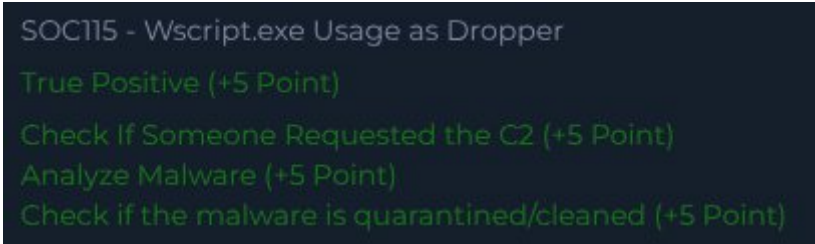

Threat Intelligence

- **OSINT (Payload):** VirusTotal lists the injector.vbs file as a Trojan, with 17/62 security vendors flagging it as malicious.
- **OSINT (Infrastructure):** The destination IP (105[.]103.253.204) belongs to ASN 36947 (Telecom Algeria) and is physically located in Algeria. It is external to the organisation and currently has 0/91 detections on VirusTotal and 0 reports on AbuseIPDB.
- **Internal Correlation:** No internal communications indicate authorised penetration testing involving this IP address.

Actions Taken

1. Verified the malicious nature of the VBScript via OSINT (VirusTotal).
2. Conducted static analysis to identify sandbox evasion, memory-resident C2 execution, and Startup folder persistence mechanisms.
3. Correlated the script's execution with firewall logs showing active, successful communication to an external Algerian IP address.
4. Contained host.
5. Declared the alert a True Positive and escalated.

Let's Defend Result

SOC115 - Wscript.exe Usage as Dropper
True Positive (+5 Point)
Check If Someone Requested the C2 (+5 Point)
Analyze Malware (+5 Point)
Check if the malware is quarantined/cleaned (+5 Point)
