

Event Information:

EventID :
61
Event Time :
Feb, 14, 2021, 06:40 PM
Rule :
SOC126 - Suspicious New Autorun Value Detected
Level :
Security Analyst
Source Address :
172.16.15.78
Source Hostname :
KatharinePRD
File Name :
OliwciaPrivInstaller.exe
File Hash :
436fa243bbfed63a99b8e9f866cd80e5
File Size :
348.00 Kb
Device Action :
Cleaned

Analysis Steps:

Email and network logs were searched with IP 172[.]16.15.78 (KatharinePRD) as the source in the relevant time-frame yielding but nothing was found that could indicate the delivery method.

On analysing with VirusTotal the malware it appears to be a Trojan of the password stealer category. 62/70 Vendors list this file as malicious as of one month ago.

62/70 security vendors flagged this file as malicious

The MITRE ATT&CK Tactics and Techniques section also gives an indication of why the malware triggered the alert relating to a suspicious new autorun value under the persistence section.

The Device Action of cleared indicates no immediate threat but further analysis must be made to determine how this file made its way onto the endpoint to act against the possibility future compromise.

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a failed True Positive.

Report:

Incident Summary

Analysis confirms a failed True Positive alert for a suspicious autorun value on the host KatharinePRD (172[.]16.15.78). A malicious executable (OliwciaPrivInstaller.exe) attempted to establish persistence but was successfully cleaned by the endpoint security controls. Searches across email and network logs yielded no results, leaving the initial delivery vector currently unknown.

Incident Details

- **Alert Name:** SOC126 - Suspicious New Autorun Value Detected
- **Target Host:** KatharinePRD (172[.]16.15.78)
- **Flagged File:** OliwciaPrivInstaller.exe
- **File Hash:** 436fa243bbfed63a99b8e9f866cd80e5
- **Device Action:** Cleaned

Analysis and Evidence

- **Execution & Persistence:** The alert was triggered by the executable attempting to establish persistence on the host. This behaviour aligns with the MITRE ATT&CK technique T1547.001 (Boot or Logon Autostart Execution: Registry Run Keys / Startup Folder).
- **Execution Status:** The threat was successfully neutralised before further compromise could occur, as evidenced by the "Cleaned" device action.
- **Delivery Mechanism:** A review of email and network logs for the relevant time-frame yielded no indication of how the file was initially delivered to the endpoint.

Threat Intelligence

- **OSINT:** VirusTotal analysis confirms the file is highly malicious, with 62/70 security vendors flagging it. It is identified as a Trojan within the password stealer category, specifically associated with the Quasar family.

Actions Taken

1. Verified the file hash against OSINT sources (VirusTotal) to confirm its malicious nature as a password-stealing Trojan.
2. Checked network and email logs, determining the initial delivery vector is currently untraceable with available telemetry.
3. Confirmed the endpoint successfully cleaned the threat.
4. Declared the alert a True Positive (Failed/Cleaned) and escalated for further analysis regarding the missing delivery vector.

Let's Defend Result
