

Event Information:

EventID :

84

Event Time :

Mar, 21, 2021, 01:04 PM

Rule :

SOC104 - Malware Detected

Level :

Security Analyst

Source Address :

172.16.17.5

Source Hostname :

SusieHost

File Name :

winrar600.exe

File Hash :

c74862e16bcc2b0e02cadb7ab14e3cd6

File Size :

2.95 Mb

Device Action :

Allowed

Analysis Steps:

Logs were searched with relevant IP 172[.]16.17.5 hostname SusieHost. This indicates that the winrar600 executable was downloaded from the legitimate WinRAR website.

Source Address contains "172.16.17.5" 2021-03-20

Strings were extracted from the file and were found to be benign and included a digital signature from win.rar GmbH.

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a False Positive.

Report:

Incident Summary

Analysis confirms a False Positive alert for malware detection on the host SusieHost (172[.]16.17.5). The alert was triggered by the download of an executable file named winrar600.exe. Investigation confirmed the file is a legitimate software installer downloaded from the official WinRAR website.

Incident Details

- **Alert Name:** SOC104 - Malware Detected
- **Source Host:** SusieHost (172[.]16.17.5)
- **Flagged File:** winrar600.exe
- **File Hash:** c74862e16bcc2b0e02cadb7ab14e3cd6
- **Device Action:** Allowed

Analysis and Evidence

- **Download Origin:** Log analysis indicates that the winrar600.exe executable was downloaded directly from the legitimate WinRAR website.
- **String Analysis:** Strings extracted from the file were found to be benign and explicitly included a digital signature from win.rar GmbH.

Threat Intelligence

- **OSINT:** VirusTotal analysis shows that only 1/69 vendors listed the file as malicious, strongly indicating a heuristic false positive.
- **Sandbox Verification:** AnyRun reports indicate no malicious activity associated with this file hash.

Actions Taken

1. Verified the file hash against OSINT sources and AnyRun, confirming no malicious activity.
2. Conducted raw string analysis to verify the file's benign nature and valid digital signature.
3. Closed the alert as a False Positive based on Playbook procedures and available information.

Analyst Recommendation

It may be worthwhile to establish a centrally managed, security-audited repository for common administrative tools. Making a vetted software centre widely available to staff will reduce the attack surface, decreasing the risk of users navigating to external sites and falling victim to drive-by downloads or malicious typo-squatting.
