

Event Information:

EventID :
92
Event Time :
May, 23, 2021, 07:32 PM
Rule :
SOC145 - Ransomware Detected
Level :
Security Analyst
Source Address :
172.16.17.88
Source Hostname :
MarkPRD
File Name :
ab.exe
File Hash :
0b486fe0503524cfe4726a4022fa6a68
File Size :
775.50 Kb
Device Action :
Allowed

Analysis Steps:

It is unclear how the Ransomware made its way onto the device or what damage it may have caused as there is no agent available on the endpoint but on investigating the file hash it is deemed to be a True Positive for ransomware.

On VirusTotal 58/69 Vendors list the file as malicious.

58/69 security vendors flagged this file as malicious

taskhost.exe

Size: 775.50 KB | Last Analysis Date: 3 days ago

Popular threat label: ransomware.avaddon/delhad

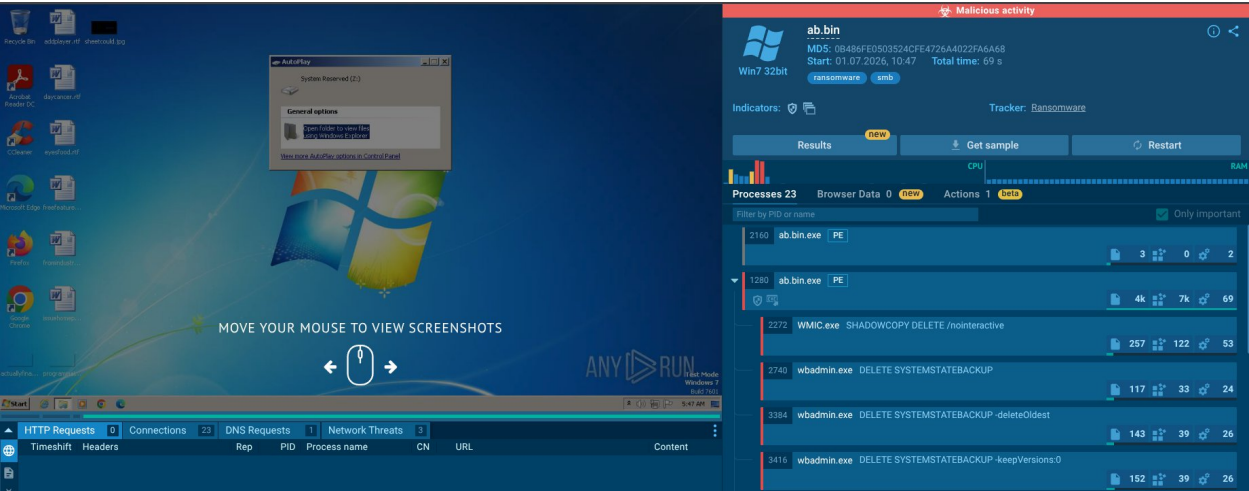

Threat categories: ransomware, trojan, dropper

Family labels: avaddon, delhad, smthx

Security vendors' analysis

Vendor	Detection
AhnLab-V3	Malware/Win.Ransom.R421165
AlICloud	RansomWare/Win/Avaddon
Antiy-AVL	Trojan(Ransom)/Win32.Avaddon
Arctic Wolf	Unsafe
AVG	Win32/MalwareX-gen [Ransom]
BitDefender	Ransom.Win32/Avaddon.4ec89e5
BitDefender Threat Engine	Trojan.Ransom.Avaddon
Cybereason	Trojan.Trojan.Ransomware.D43A
Emsisoft	Win32/MalwareX-gen [Ransom]
Avira (no cloud)	TR/W32.MalwareX

An AnyRun report found via the file hash lists it as ransomware and it can be seen removing back-ups and engaging in behaviour typical of ransomware.

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a successful True Positive.

Report:

Incident Summary

Analysis confirms a True Positive ransomware alert for the host MarkPRD (172[.]16.17.88). The alert was triggered by the presence of a known ransomware executable (ab.exe). Due to the absence of an active security agent on the endpoint, local execution logs are unavailable; however, the device action was logged as "Allowed". Sandbox analysis confirms the payload exhibits highly destructive behaviour, including the deletion of volume shadow copies and system state backups.

Incident Details

- **Alert Name:** SOC145 - Ransomware Detected
- **Target Host:** MarkPRD (172[.]16.17.88)
- **Flagged File:** ab.exe
- **File Hash:** 0b486fe0503524cfe4726a4022fa6a68
- **Device Action:** Allowed

Analysis and Evidence

- **Endpoint Telemetry:** Endpoint logs are unavailable due to the lack of an installed security agent on the host machine.
- **Payload Behaviour:** Sandbox execution (AnyRun) confirms the file acts as ransomware. It successfully executes destructive commands designed to prevent system recovery, specifically WMIC.exe SHADOWCOPY DELETE /nointeractive and wbadm.exe DELETE SYSTEMSTATEBACKUP.
- **Execution Status:** Because the initial device action was "Allowed" and no local agent is present to halt execution, a full ransomware compromise of the host must be assumed.

Threat Intelligence

- **OSINT:** VirusTotal analysis definitively identifies the hash as malicious, with 58/69 security vendors classifying it as ransomware (specifically associated with the Avaddon family).

Actions Taken

1. Attempted endpoint containment.
2. Confirmed the payload exhibits destructive ransomware behaviour via sandbox analysis.
3. Declared the alert a True Positive and escalated for further analysis.

Let's Defend Result

SOC145 - Ransomware Detected

True Positive (+5 Point)

Check If Someone Requested the C2 (+5 Point)

Analyze Malware (+5 Point)

Check if the malware is quarantined/cleaned (+5 Point)
