

Event Information:

EventID :
125
Event Time :
Sep, 30, 2022, 07:19 AM
Rule :
SOC175 - PowerShell Found in Requested URL - Possible CVE-2022-41082
Exploitation
Level :
Security Analyst
Hostname :
Exchange Server 2
Destination IP Address :
172.16.20.8
Log Source :
IIS
Source IP Address :
58.237.200.6
Request URL :
/autodiscover/autodiscover.json?@evil.com/owa/&Email=autodiscover/autodiscover.js
n%3f@evil.com&Protocol=XYZ&FooProtocol=PowerShell
HTTP Method :
GET
User-Agent :
Mozilla/5.0 zgrab/0.x
Action :
Blocked
Alert Trigger Reason :
Request URL Contains PowerShell

Analysis Steps:

Logs were searched with attacker IP 58[.]237.200.6 as the source and Exchange Server 2 IP 172[.]16.20.8 as the destination in the relevant time-frame yielding 3 events. The attacker can be seen attempting the ProxyNotShell exploit (CVE-2022-41082) on the Microsoft Exchange server endpoint utilising the zgrab tool. These attempts were, however, successfully blocked.

Domain Name	skbroadband.com
Country	 Korea (the Republic of)
City	Daegu, Daegu

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a failed True Positive.

Report:

Incident Summary

Analysis confirms a failed True Positive ProxyNotShell exploit (CVE-2022-41082) on the Microsoft Exchange server endpoint utilising the zgrab tool - an automated, internet-wide network scanner.

Incident Details

- **Alert Name:** SOC175 - PowerShell Found in Requested URL - Possible CVE-2022-41082
- **Attacker IP:** 58[.]237.200.6 AS 9318 (SK Broadband Co Ltd)
- **Target Host:** Exchange Server 2 (172[.]16.20.8)
- **Attack Vector:** HTTP GET requests

Analysis and Evidence

- **Attack Execution:**

Request URL :

/autodiscover/autodiscover.json?@evil.com/owa/&Email=autodiscover/autodiscover.json%3f@evil.com&Protocol=XYZ&FooProtocol=Powershell

By utilising "zgrab", an automated, internet-wide network scanner. The attacker used GET requests to conduct ProxyNotShell exploit (CVE-2022-41082) on the Microsoft Exchange server. Microsoft Exchange has a legitimate feature called "Autodiscover" that helps configure email clients. The attacker sends a request to /autodiscover/autodiscover.json, uses the syntax seen in [@]evil[.]com which allows for bypassing the front end server and can be seen attempting to run Powershell on the back-end server via &FooProtocol=Powershell.

- **Failure Confirmation:** It can be seen in the logs for each interaction with the malicious IP that the Device Action is Blocked. no suspicious powershell.exe processes spawned at or immediately after 07:19 AM.

Threat Intelligence

- **OSINT:** The IP is not in our database. VirusTotal lists 0/91 security vendors flagged this IP address as malicious. AbuseIPDB lists this IP was reported 608 times with a 0% confidence of abuse.
- **Internal Correlation:** A review of internal communications confirmed no authorised red team testing scheduled involving any devices related to this alert in the relevant time-frame.

Actions Taken

1. Declared failed True Positive.
