Inbound Email Containing Suspicious External Link
Medium
Phishing
Oct 16th 2026 at 10:57

Description:

This alert was triggered by an inbound email contains one or more external links due to potentially suspicious characteristics. As part of the investigation, check firewall or proxy logs to determine whether any endpoints have attempted to access the URLs in the email and whether those connections were allowed or blocked.

datasource:

email

timestamp:

10/16/2026 10:55:00.685

subject:

Action Required: Finalize Your Onboarding Profile

sender:

onboarding@hrconnex.thm

recipient:

j.garcia@thetrydaily.thm

attachment:

None

content:

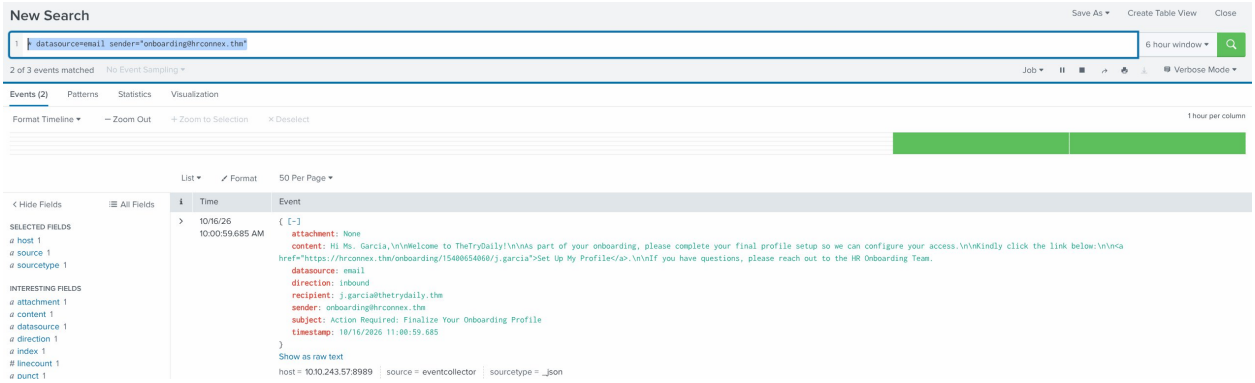

Hi Ms. Garcia,\n\nWelcome to TheTryDaily!\n\nAs part of your onboarding, please complete your final profile setup so we can configure your access.\n\nKindly please click the link below:\n\nSet Up My Profile.\n\nIf you have questions, please reach out to the HR Onboarding Team.

direction:

inbound

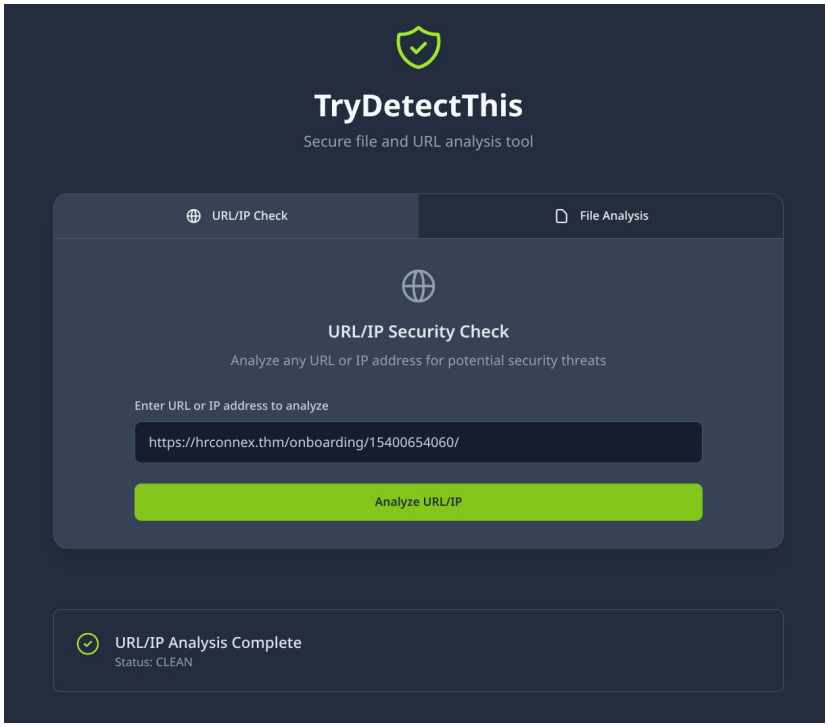

Analysis Steps:

The logs within Splunk were filtered by data source and sender to find the email which triggered the alert:
* datasource=email sender="onboarding@hrconnex.thm"

The sender of the email appears to make use of official infrastructure and the contents of the email appear in-line with typical on-boarding procedure.

To evidence this being the case the onboarding URL was checked against internal threat intelligence and was found to be clean.

Therefore, the recipient j.garcia@thetrydaily[.]thm is not deemed to be at risk and the alert has been declared a False Positive.

Report:

Time of Activity:

List of Related Entities:

Email Recipient: j.garcia@thetrydaily.thm

Sender: onboarding@hrconnex.thm

Reason for Classifying as False Positive:

The email with the subject line "Action Required: Finalize Your Onboarding Profile" is in line with standard onboarding procedure. All emails involved in this alert utilise official TryHackMe infrastructure. To be entirely confident that the external link was not malicious it was checked against internal threat intelligence and found to be benign. Our detection rules may require tuning as emails such as this being the cause of an alert could lead to analyst alert fatigue.
