Request URL	https://bit.ly/TAPSCAN

When expanding the shortened URL we can see that it leads to what appears to be a Play Store App TapScanner, the name at first glance indicates the possibility of Spyware.

When doing additional research it became clear that this app is legitimate and is used for PDF scanning.

The user likely clicked on an advertisement or a promotional link for this PDF scanner which was shortened via bitly.

Based on following Playbook procedure and the analysis of available information, this alert is determined to be a False Positive.

Report:

Incident Summary

Analysis confirms a False Positive alert. Threat Intelligence (T.I.) triggered on the shortened URL <https://bit.ly/TAPSCAN> due to its association with general URL shortener traffic. Investigation reveals the link directs to a legitimate Google Play Store page for "TapScanner" a PDF scanning application, containing standard affiliate tracking parameters. No malicious activity or compromise occurred.

Incident Details

- **Alert Name:** SOC105 - Requested T.I. URL address
- **Target User:** Mark (MarksPhone)
- **Original URL:** <https://bit.ly/TAPSCAN>
- **Device Action:** Allowed

Analysis and Evidence

- **URL Expansion:** The shortened link was expanded to reveal the destination: [hxxps://play.google[.]com/store/apps/details?id=pdf.tap.scanner&referrer=appmetrica_tracking_id%3D674968008912837528%26ym_tracking_id%3D1532080171044702420]
- **Legitimacy Verification:** Research confirms "TapScanner" is a legitimate mobile application used for document scanning.
- **Context of Access:** The destination URL included affiliate tracking parameters (referrer=appmetrica_tracking_id...), suggesting the user likely clicked on a legitimate, albeit tracked, advertisement or promotional link.
- **Safety Check:** External security tooling confirmed the destination as a secure HTTPS connection and did not identify any malicious threats on the landing page.

Actions Taken

1. Performed URL expansion to reveal the final destination of the shortened link.
2. Conducted OSINT research on the destination application to confirm its legitimacy.
3. Verified the connection security and lack of malicious indicators at the destination.
4. Declared the alert a False Positive and closed the ticket.
